Thanks for filling out [Report issue - Group 20](#)

Here's what was received.

Report issue - Group 20

Please fill out this form to report an issue/vulnerability in the group 20.

Your email (utkarsh20143@iiitd.ac.in) was recorded when you submitted this form.

Vulnerability type

*

Select the type of vulnerability, or specify a custom one.

☐ XSS

☐ CSRF

☐ Feature bug

☒ Other: DOS

Steps to reproduce

*

Describe the steps to reproduce the vulnerability.

Go to the register page of the website

Enter an email id and password

You will be sent to the next step in the sign-in process, which requires the OTP. Also, an OTP will be sent to you

Go back to the previous page, and try to register again with the same email and password

You will be send a new OTP again
The OTP sending is not rate limited, and the website has no DOS prevention
Also, the OTP is sent via a Gmail account. These emails have a daily limit of 2000 sent mails per day.
The OTP sending feature can be spammed to the point where no new mails are sent, after which the OTP sending feature is blocked for 24 hours

Proof of concept

*

Provide a proof of concept for the vulnerability.

I registered myself on the website
I intercepted the POST request on BurpSuite
I wrote a python script to spam that POST request on the website
The request was spammed a 2000 times, until the website cannot send anymore OTP mails
Therefore, the OTP sending feature of the site was restricted for 24 hours, which means that all the features that require OTP were blocked for 24 hours
Thus, no new user can register on the website for 24 hours

Impact

*

Describe the impact of the vulnerability. How bad is it?

High severity; no new user can register on the website for 24 hours. This attack can also be run the next day, and thus if this attack is run every day, no user will ever be able to join the website

Screenshots/attachments

Provide screenshots or other attachments to help explain the vulnerability.
