Describe the steps to reproduce the vulnerability.

The website is hosted on an Apache server. These websites are susceptible to Slow Loris attacks, and the programmers have not taken steps to mitigate this attack

Proof of concept

*

Provide a proof of concept for the vulnerability.

I have ran a script to run a Slow Loris attack. This attack tries to keep many connections to the target web server open and hold them open as long as possible.

This has brought the website down and is unusable as long as I keep the attack running

Severe; the website is easily DOSable, which means that this website can be brought down whenever an attacker wants.
