Thanks for filling out [Report issue - Group 5](#)

Here's what was received.

Report issue - Group 5

Please fill out this form to report an issue/vulnerability in the group 5.

Your email (utkarsh20143@iiitd.ac.in) was recorded when you submitted this form.

Vulnerability type

*

Select the type of vulnerability, or specify a custom one.

☐ XSS

☐ CSRF

☐ Feature bug

☒ Other: Access control

Steps to reproduce

*

Describe the steps to reproduce the vulnerability.

Put <https://192.168.2.237/PatientHomepage> in the URL

You can access the entire Patient Homepage portal without needing the credentials to log in

Proof of concept

*

Provide a proof of concept for the vulnerability.

I can directly access the Patient Homepage without needing the credentials to log in. This means that any unverified user can access the information about the doctors, hospitals, etc. The website lacks a lot of functionality, but if more patient functionality was present, that could also be abused without needing credentials

Impact

*

Describe the impact of the vulnerability. How bad is it?

Medium; unapproved bad faith actors can obtain information about doctors, hospitals, etc, that is supposed to be only accessible by approved registered users. The website lacks a lot of functionalities, but if those functionalities were present, the impact of this vulnerability would be severe

Screenshots/attachments

Provide screenshots or other attachments to help explain the vulnerability.

Report issue - Group 5

Please fill out this form to report an issue/vulnerability in the group 5.

Your email (utkarsh20143@iiitd.ac.in) was recorded when you submitted this form.

Vulnerability type

*

Select the type of vulnerability, or specify a custom one.

☐ XSS

☐ CSRF

☐ Feature bug

☒ Other: DOS

Steps to reproduce

*

Describe the steps to reproduce the vulnerability.

Go to the register user page

Fill out the form

An OTP will be sent to your mail

You can spam the Register button multiple times, and this would register you over and over again, and it will send out an OTP again and again

The OTP is sent through a G Mail account

Gmail accounts have a sending limit of 2000 mails per day

If this limit is reached, then no more mails can be sent for the day

Proof of concept

*

Provide a proof of concept for the vulnerability.

I wrote an autoclicker script, and ran it on the Register User webpage. In a short period of time, I was able to spam the request over 2000 times, and 2000 OTPs were sent from their email to me.

Because of this, the Gmail account was restricted from sending any more emails for 24 hours.

Hence, the registration functionality was jammed for 24 hours

Impact

*

Describe the impact of the vulnerability. How bad is it?

Medium to High; using an autoclicker, the registration of the website can be blocked for 24 hours, and thus no new users can join the website for those 24 hours. This attack can be carried out in a short time the next day as well, thus the registration on the website can essentially be blocked forever

Screenshots/attachments

Provide screenshots or other attachments to help explain the vulnerability.
