Thanks for filling out [Report issue - Group 6](#)

Here's what was received.

Report issue - Group 6

Please fill out this form to report an issue/vulnerability in the group 6.

Your email (utkarsh20143@iiitd.ac.in) was recorded when you submitted this form.

Vulnerability type

*

Select the type of vulnerability, or specify a custom one.

☐ XSS

☐ CSRF

☐ Feature bug

☒ Other: DOS

Steps to reproduce

*

Describe the steps to reproduce the vulnerability.

The website has an OTP feature. When a user wants to edit his profile, the website will mail an OTP to the user for verification. There is no cooldown to the Resend OTP button, thus the button can be spammed to send multiple OTPs. The OTP is sent from a private Outlook mail

ID, which has a daily limit of 500 mails a day. If that limit can be reached, no more OTP can be sent for 24 hours.

Proof of concept

*

Provide a proof of concept for the vulnerability.

I created an account, and went to Edit Profile feature. It sent me an OTP, and opened up a tab for me in which there is a button to Resend OTP. I used an autoclicker script on my laptop to spam click the Resend OTP button. I repeated this procedure six times. This sent enough OTP mails to reach the Outlook limit, and thus the mail was jammed.

Therefore no mails can be sent from that account for 24 hours, which means that no OTPs can be sent from that account for 24 hours, and thus the features relying on OTP are jammed for those 24 hours.

The website will not display an explicit error on the OTP being jammed, but anyone trying to generate an OTP will not receive it.

Impact

*

Describe the impact of the vulnerability. How bad is it?

Mild; the features relying solely on OTP are jammed. The Edit Profile feature is completely blocked for 24 hours. Log in is also effected.

Screenshots/attachments

Provide screenshots or other attachments to help explain the vulnerability.
