Thanks for filling out [Report issue - Group 6](#)

Here's what was received.

Report issue - Group 6

Please fill out this form to report an issue/vulnerability in the group 6.

Your email (utkarsh20143@iiitd.ac.in) was recorded when you submitted this form.

Vulnerability type

*

Select the type of vulnerability, or specify a custom one.

☐ XSS

☐ CSRF

☒ Feature bug

☐ Other:

Steps to reproduce

*

Describe the steps to reproduce the vulnerability.

There is a method to log in with an email and otp

On entering the email, we are brought to the OTP tab

The OTP is supposed to have a virtual keyboard. There is no virtual keyboard for the OTP.

Proof of concept

*

Provide a proof of concept for the vulnerability.

-

Impact

*

Describe the impact of the vulnerability. How bad is it?

An important feature is missing

Screenshots/attachments

Provide screenshots or other attachments to help explain the vulnerability.

Here's what was received.

Report issue - Group 6

Please fill out this form to report an issue/vulnerability in the group 6.

Your email (utkarsh20143@iiitd.ac.in) was recorded when you submitted this form.

Vulnerability type

*

Select the type of vulnerability, or specify a custom one.

- ☐ XSS
- ☐ CSRF
- ☐ Feature bug
- ☒ Other: Unauthorized access

Steps to reproduce

*

Describe the steps to reproduce the vulnerability.

There is an option to log in to the website with just the email and an OTP
After entering the email, an OTP is sent to the mail
The OTP is a 6 digit number
In the form to fill the OTP, there is no limit
Hence, you can try filling the OTP as many times as you want
This means that the OTP can be brute forced, and unauthorized access can be obtained to someone else's account

Proof of concept

*

Provide a proof of concept for the vulnerability.

I entered someone else's email ID in the Log In With OTP field
I ran a script to brute force the OTP. This took a few hours
I then had access to the account and everything in it until I logged out of it

Impact

*

Describe the impact of the vulnerability. How bad is it?

High; given sufficient time, any account can be brute forced into, and sensitive information about that person can be leaked. The hacker can also abuse all the functionalities of the account, like making appointments, ordering medicines, viewing documents, etc

Screenshots/attachments

Provide screenshots or other attachments to help explain the vulnerability.
